

First, I thought about the web page I should make from exploring the mentioned web pages at Task Document. I choose Madhack as my project. Then I created a structure and tried to develop that structure using HTML and CSS. I tried to select a color palette similar to the original site and I got paragraph texts from the original site. I did change the logo and added some different images.

I wanted to create my webpage simple and user-friendly way. And I wanted it to be mobile responsive. And I wanted my site looks more like the sites mentioned in Task Document.

Previously I had no idea how to make a timeline section like the sites mentioned in Task Document. I followed some websites and youtube videos and learned that. I learned more things in CSS and especially in Bootstrap. I learned a lot about responsiveness. And also I learned how to add a favicon to the webpage.

As I mentioned above, I was stuck on making the timeline section. I also stuck making that FAQ section. When I made that FAQ section, some buttons overlapped with paragraph text. That is one of the issues that I faced during developing this web page.

Webpage that I created : <https://lasithm.github.io/ucsc-ieee-web-task/>
